GARLIC THREAT

STAY AHEAD OF THE THREAT.

what is Shield testing, actually

Shield is ongoing testing for teams that ship every week. **Here is exactly what we test, and how.**

Shield, at a glance.

Security that keeps up with your releases, instead of one report that goes stale.

THE NUMBERS

FULL TEST

2

apps, tested every 3 months

EACH FULL TEST

3

weeks of testing, Breach-level

CHECK-IN

Monthly

note on what changed

PRICE

$2,500

a month, minimum 3 months

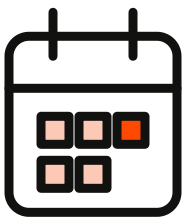

INCLUDED IN THE PRICE

- Quarterly report
- Attestation letter
- Monthly note
- Retests
- Priority fix reviews
- Direct channel

Who Shield is for.

A team that ships every week and wants security to keep up with releases, instead of one report that goes stale.

BEST FOR

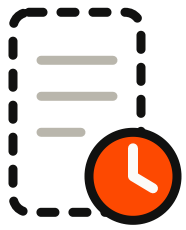

Ships every week

Security moves at your pace.

Checks on every release

Every big feature, before it goes live.

No stale report

Not one report that goes stale.

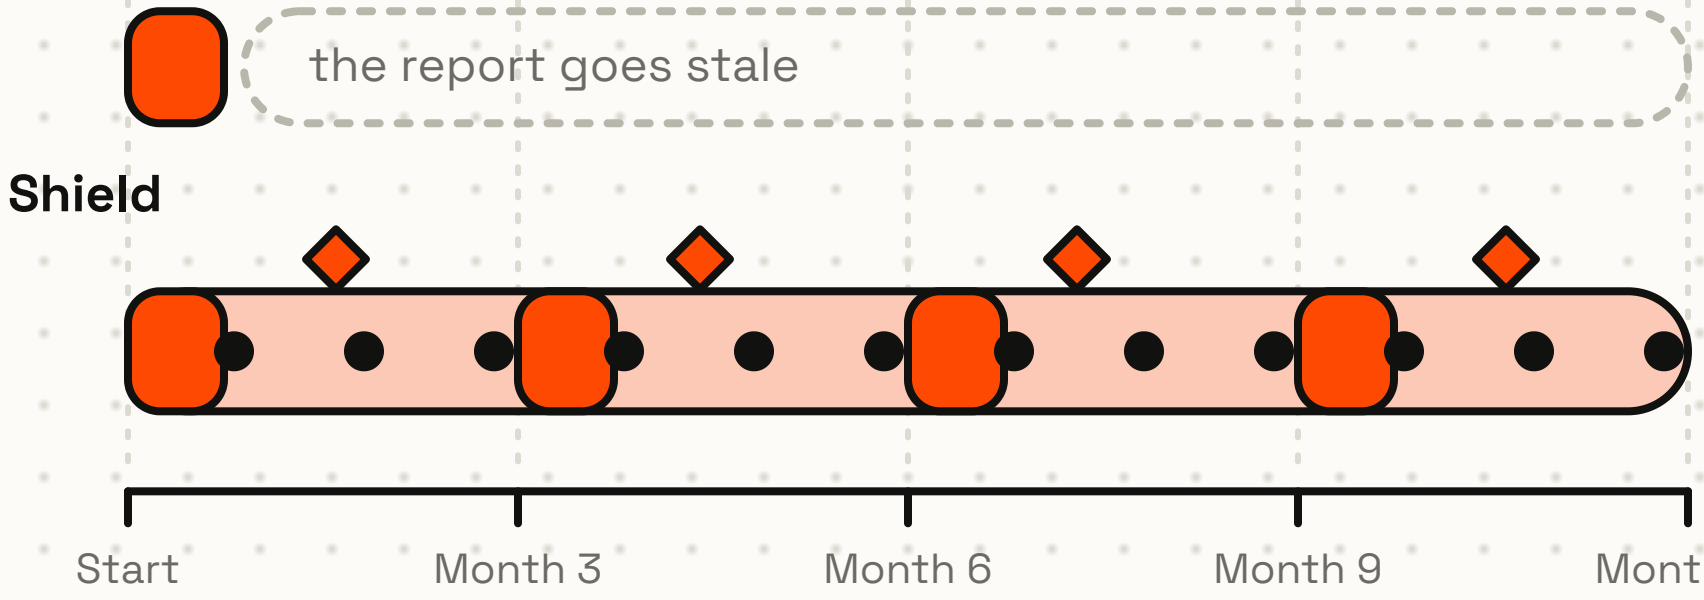

WHAT SHIELD IS

Security that keeps up, *every month.*

Plain words first. If you are a developer, the technical term follows in brackets. IDOR

Always on, *not once.*

Shield is testing that keeps going as you ship, instead of one report that goes stale.

Every month
A note on what changed.

Before launch
A focused test of each big feature.

Every 3 months
A full test. 3 weeks.

Illustrative year. Your own release dates set when the feature checks happen.

Four checks. *Every time.*

They catch the flaw behind the big AI-app breaches: access rules left open, so a stranger can read or change your data. Row Level Security / RLS

01

We try to read your data **without logging in**, using your app's own public key.

logged-out query

02

We walk through your protected pages **with no login**, to see what opens anyway.

logged-out route walk

03

We log in as one user and try to **open another user's data.**

two-account ownership swap / IDOR

04

We search the code your app ships for **leaked keys and secrets.**

secret search

Six things you get.

All included in the monthly price.

01

A full test of up to 2 apps, every 3 months.

02

A check on every big new feature before it goes live.

03

A short monthly note: what changed, what we checked, what needs attention.

04

A quarterly report and letter.

05

Retests included, and priority help with fixes.

06

A direct channel, by email or chat, for security questions.

$2,500 a month, minimum 3 months.

What we test, *and when.*

Four rhythms, running together.

Every month

What changed? We check the new surface.

Before launch

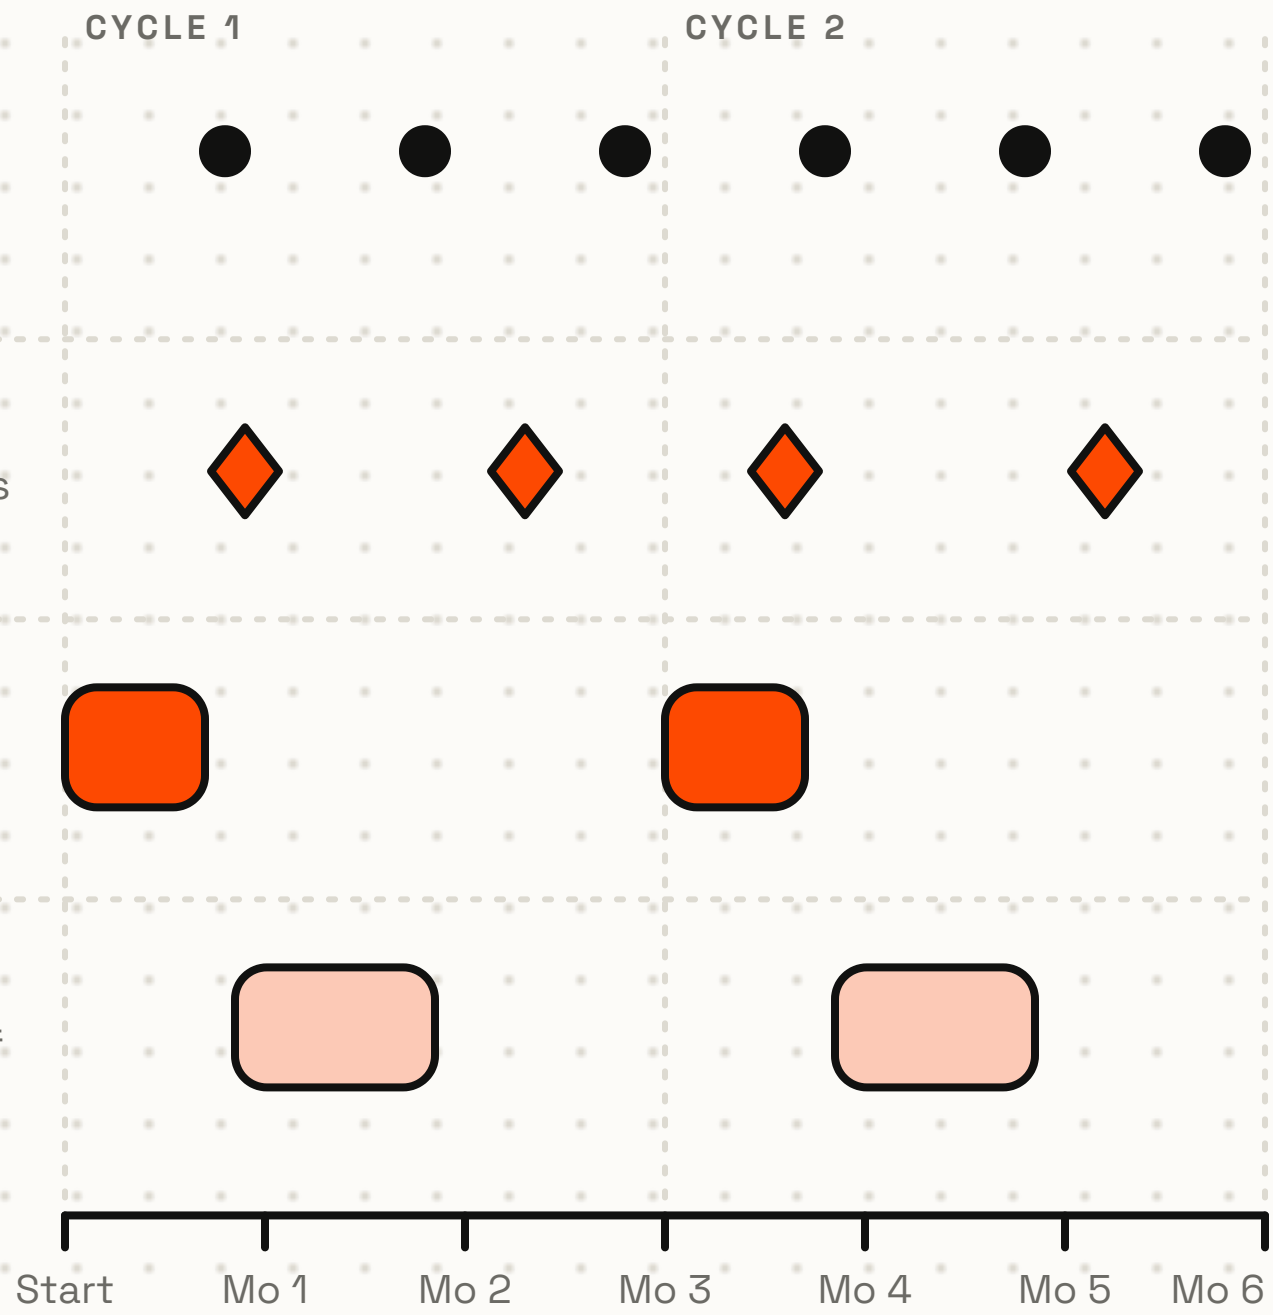

Every big new feature gets a focused test.

Every 3 months

A full Breach-level test of up to 2 apps. 3 weeks.

Every fix

Checked within 30 days of the report it came from.

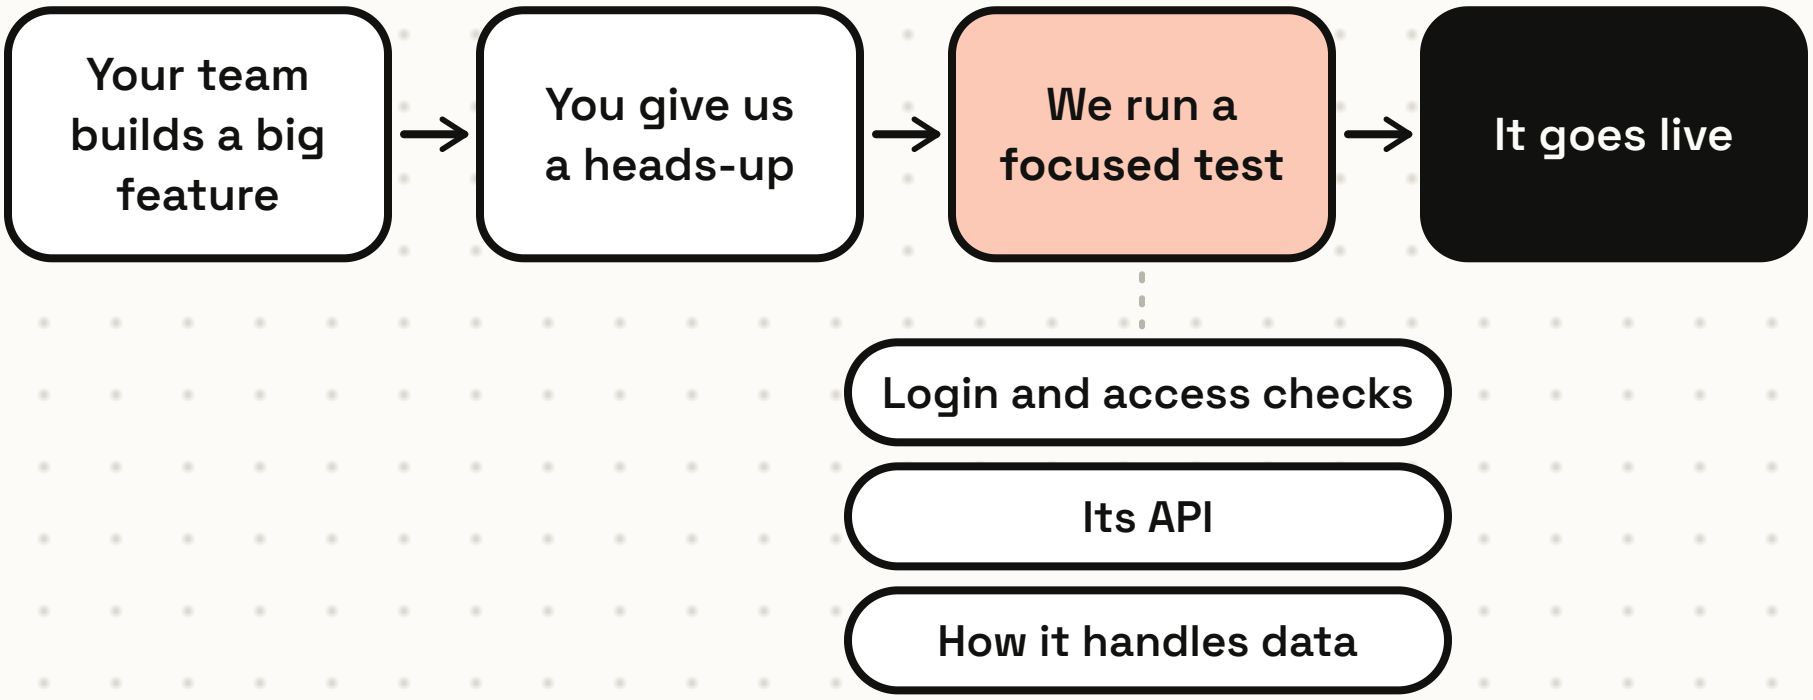

Illustrative timeline. Your own release dates set the pre-launch checks.

Before launch, *not after.*

A heads-up before big releases, so we test before launch, not after.

FOCUSED TEST

NOT LIKE THIS

Every big new feature, tested for login and access checks, its API, and how it handles data.

The monthly *note.*

Short and in plain English: what changed, what we checked, what needs attention.

EXAMPLE NOTE · NOT CLIENT DATA

MONTH 2

Your monthly security note

WHAT CHANGED

A new team-invite feature and a new settings page.

WHAT WE CHECKED

The new surface: login and access checks, the new API routes, and how invited users' data is handled.

WHAT NEEDS ATTENTION

FIX THIS WEEK Invite links never expire.

AND EVERY 3 MONTHS

A full report and letter, from a full Breach-level test.

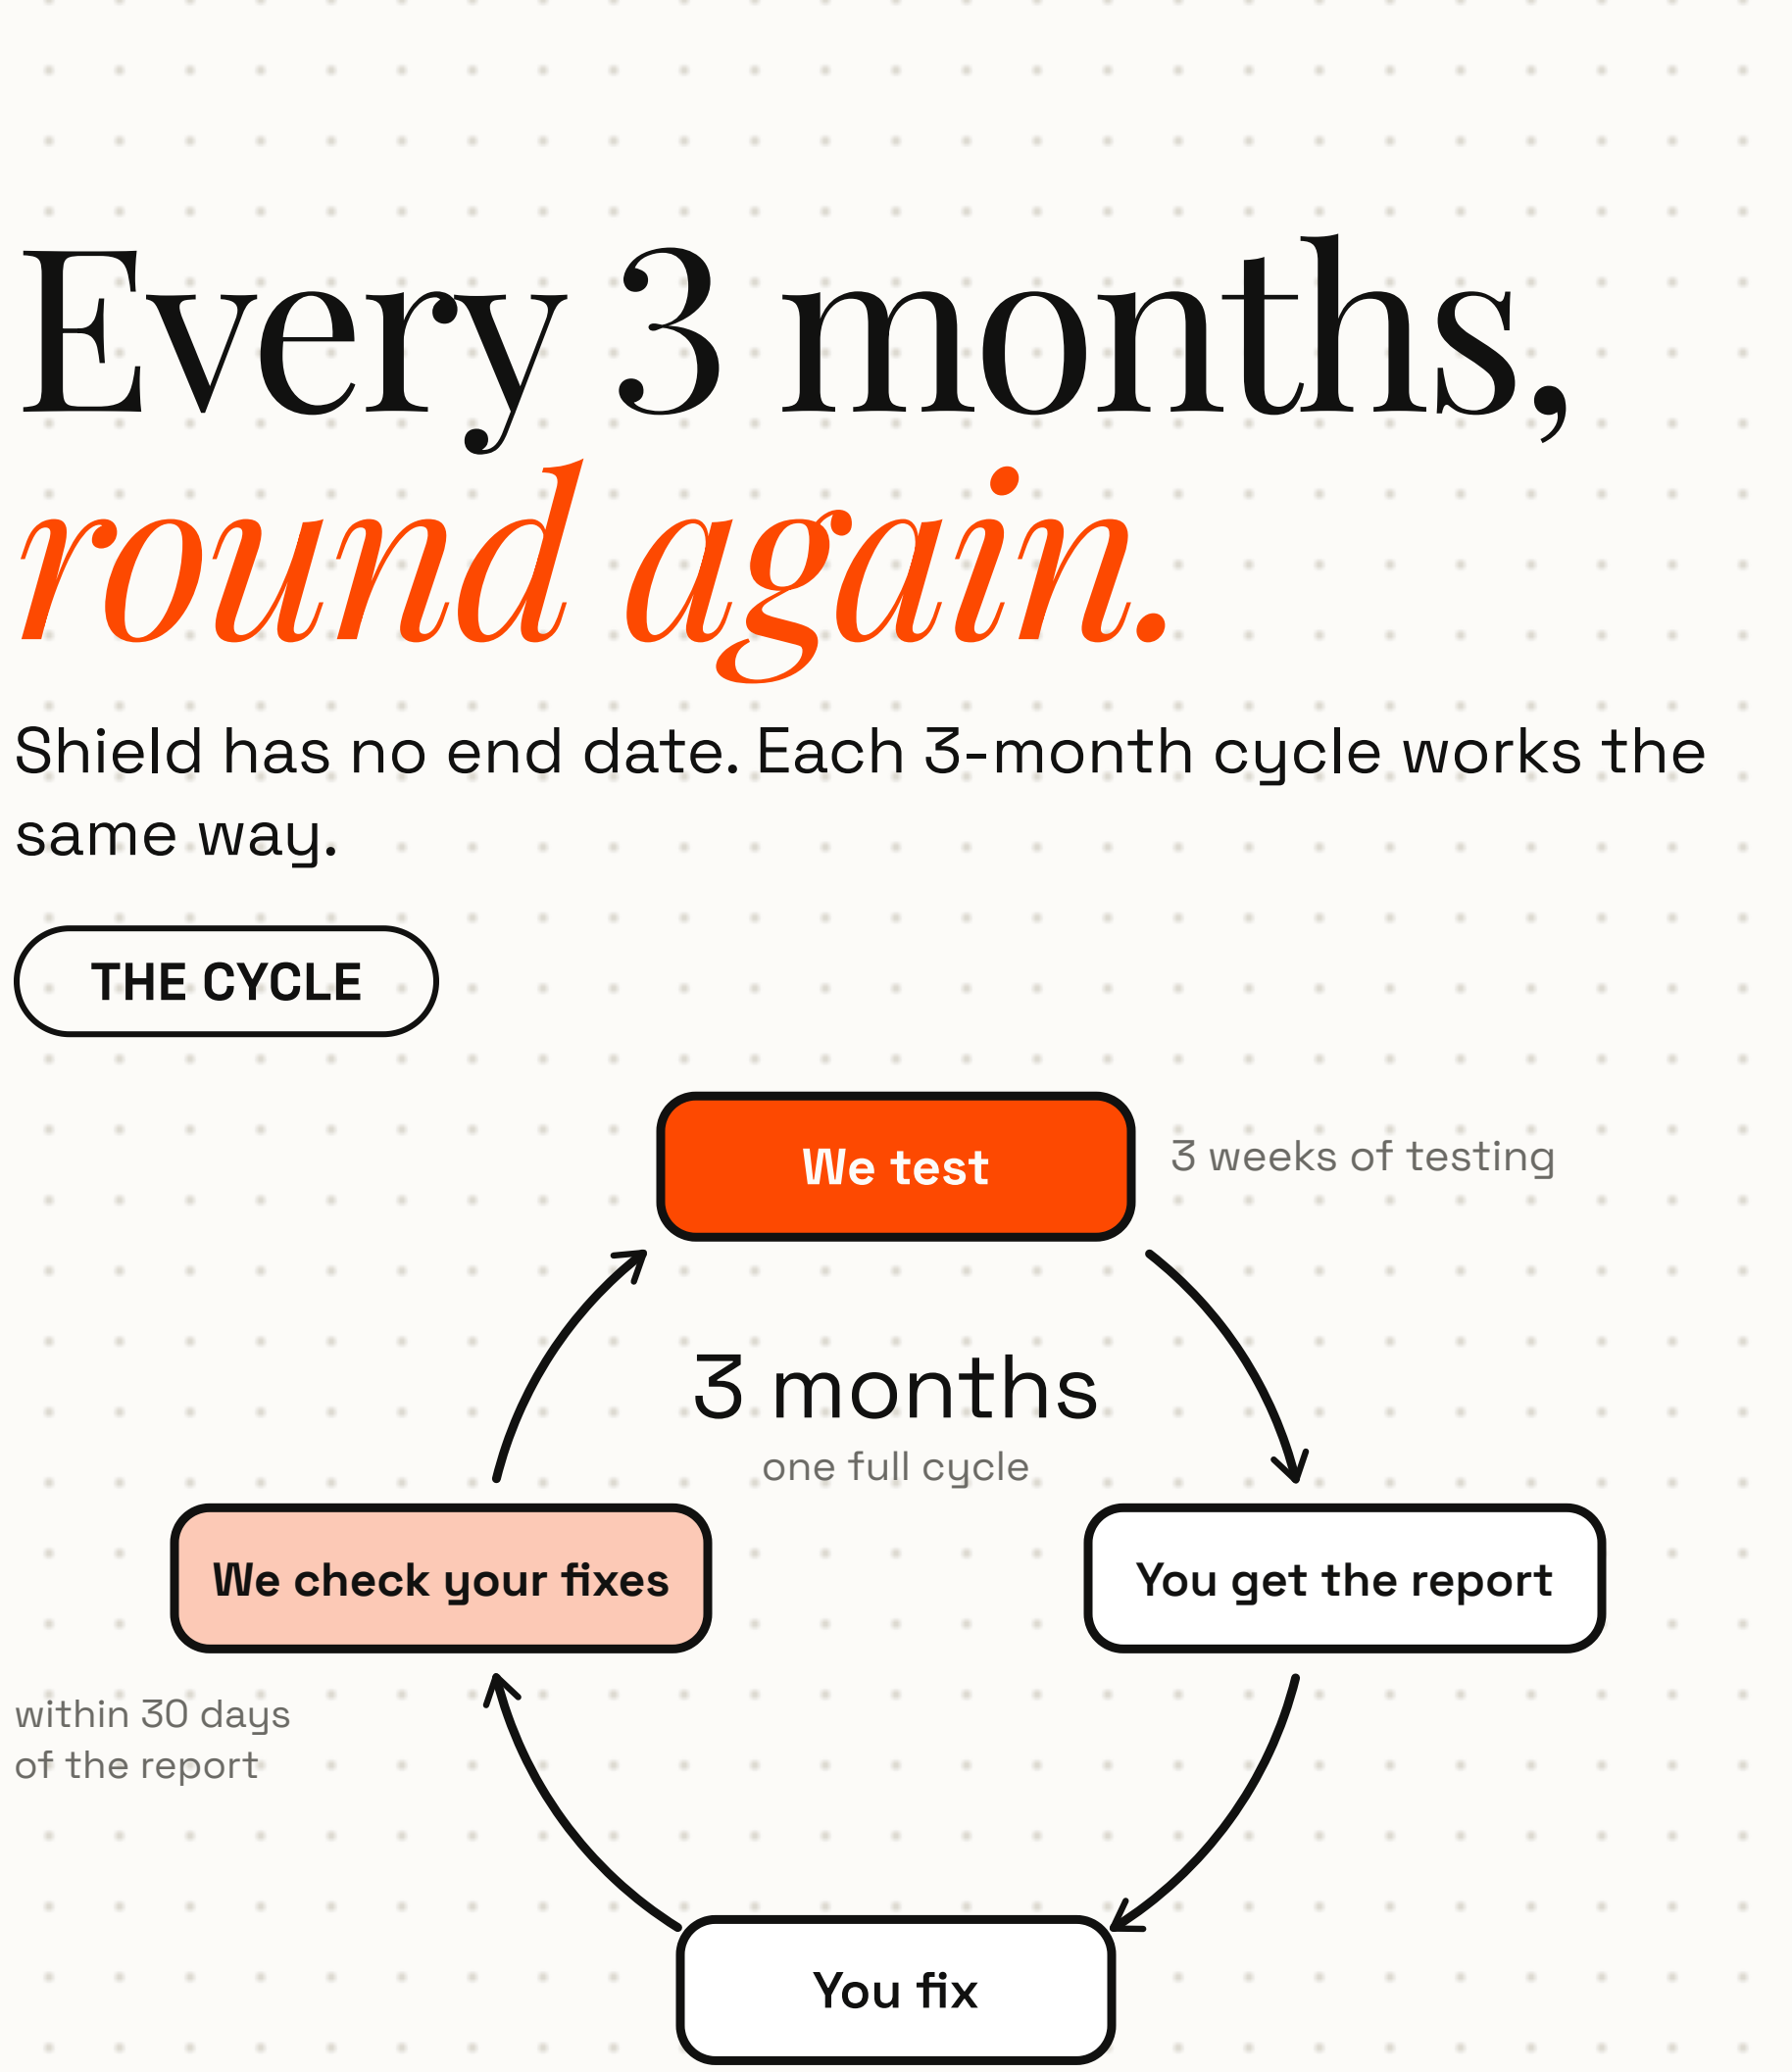

Every 3 months, *round again.*

Shield has no end date. Each 3-month cycle works the same way.

THE CYCLE

We test

3 weeks of testing

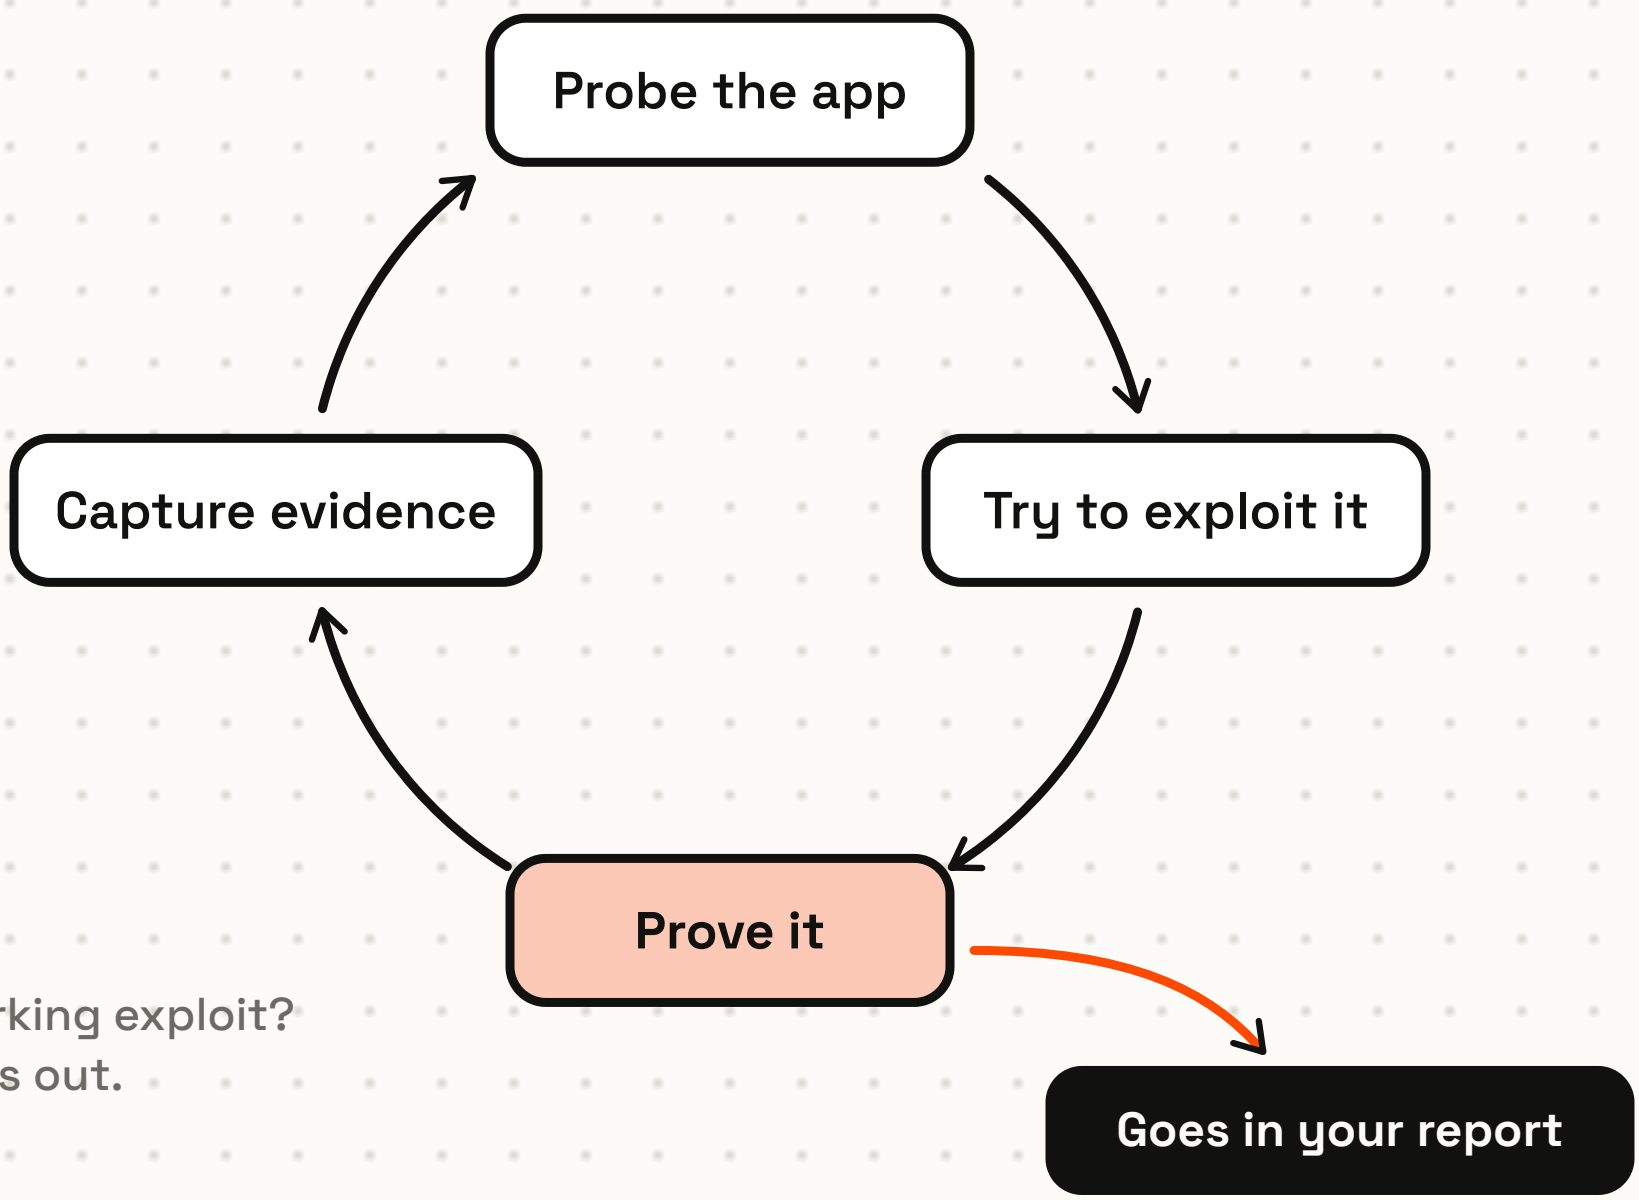

No end date.
Minimum 3 months.

No proof, *no report.*

We attack your app the way a real attacker would, with your written permission, and prove every finding with a working exploit.

THE METHOD

Guided by OWASP, NIST and PTES. Every finding gets proof, a fix and a priority.

What we need.

EVERY PLAN

The web address of your app

Two test logins: one user, one admin

One person we can ask questions

FOR SHIELD, ALSO

Test logins kept working for the whole subscription.

A heads-up before big releases, so we test before launch, not after.

One technical contact for questions.

Our rules, *every test.*

01 **Written permission and an agreed scope** come before any testing starts. We test nothing outside it.

02 We never **delete data, crash your site,** email your staff, or test systems you do not own, unless agreed in writing under Custom.

03 Production gets **safe, gentle checks.** A staging copy is better when you have one.

04 Proof stays **private** and is shared only with you. We publish nothing without your written permission.

05 **Critical problems** are told to you as soon as we prove them. We do not hold them for the final report.

06 You can **stop the testing** at any time by telling your contact.

What Shield *leaves out.*

NOT IN SHIELD

- ✕ More than 2 apps
- ✕ Your internal network
- ✕ Emails to your staff
- ✕ Compliance audits

NEED MORE? STEP UP TO

Custom quoted after a free scoping call

Compliance evidence mapped to SOC 2 and ISO 27001 controls, and everything else outside a Shield plan.

A third app? Scope it under Custom, or add a second Shield plan.

Price and what you get.

SHIELD · MONTHLY PRICE

$2,500

a month

MINIMUM

3 months. No end date after that: Shield runs month to month.

INCLUDED IN THE PRICE

- ✓ Quarterly report and letter
- ✓ A monthly note
- ✓ Retests
- ✓ Priority fix reviews

Our promise, in *one line.*

THE GUARANTEE

If your auditor, insurer or enterprise customer rejects this report as a valid penetration test, **we refund you in full.**

Send us the written rejection within 30 days of the report. We do not promise a clean result, and we do not promise to find problems. We promise a real test and a report that stands up.
